OFF ROAD

1:10 SCALE

2 WHEEL DRIVE

KIT

THE RC10T.

CHAMPIONSHIP-WINNING ENGINEERING

The Truck category of off road competition makes unique demands in chassis, suspension and overall design. Team Associated's RC10T Cliff Lett Edition benefits from the race-proven engineering of our Multi-time World Champion RC10. But in fact, the RC10T shares only the alloy monocoque tub, Stealth A.T.C. transmission and racing shocks of the legendary RC10 Team Car.

Prototypes of the RC10T proved highly competitive, finishing first and second in the 1991 Florida Winter Championships. Unique features, all of which are incorporated into the production RC10T, include a long wheelbase and super wide track to optimize the Truck Class regulations. Suspension arms are precision molded from virgin nylon and reinforced to be exceptionally strong, yet very light. The four wheel independent suspension, shocks, and towers also allow for extremely long travel.

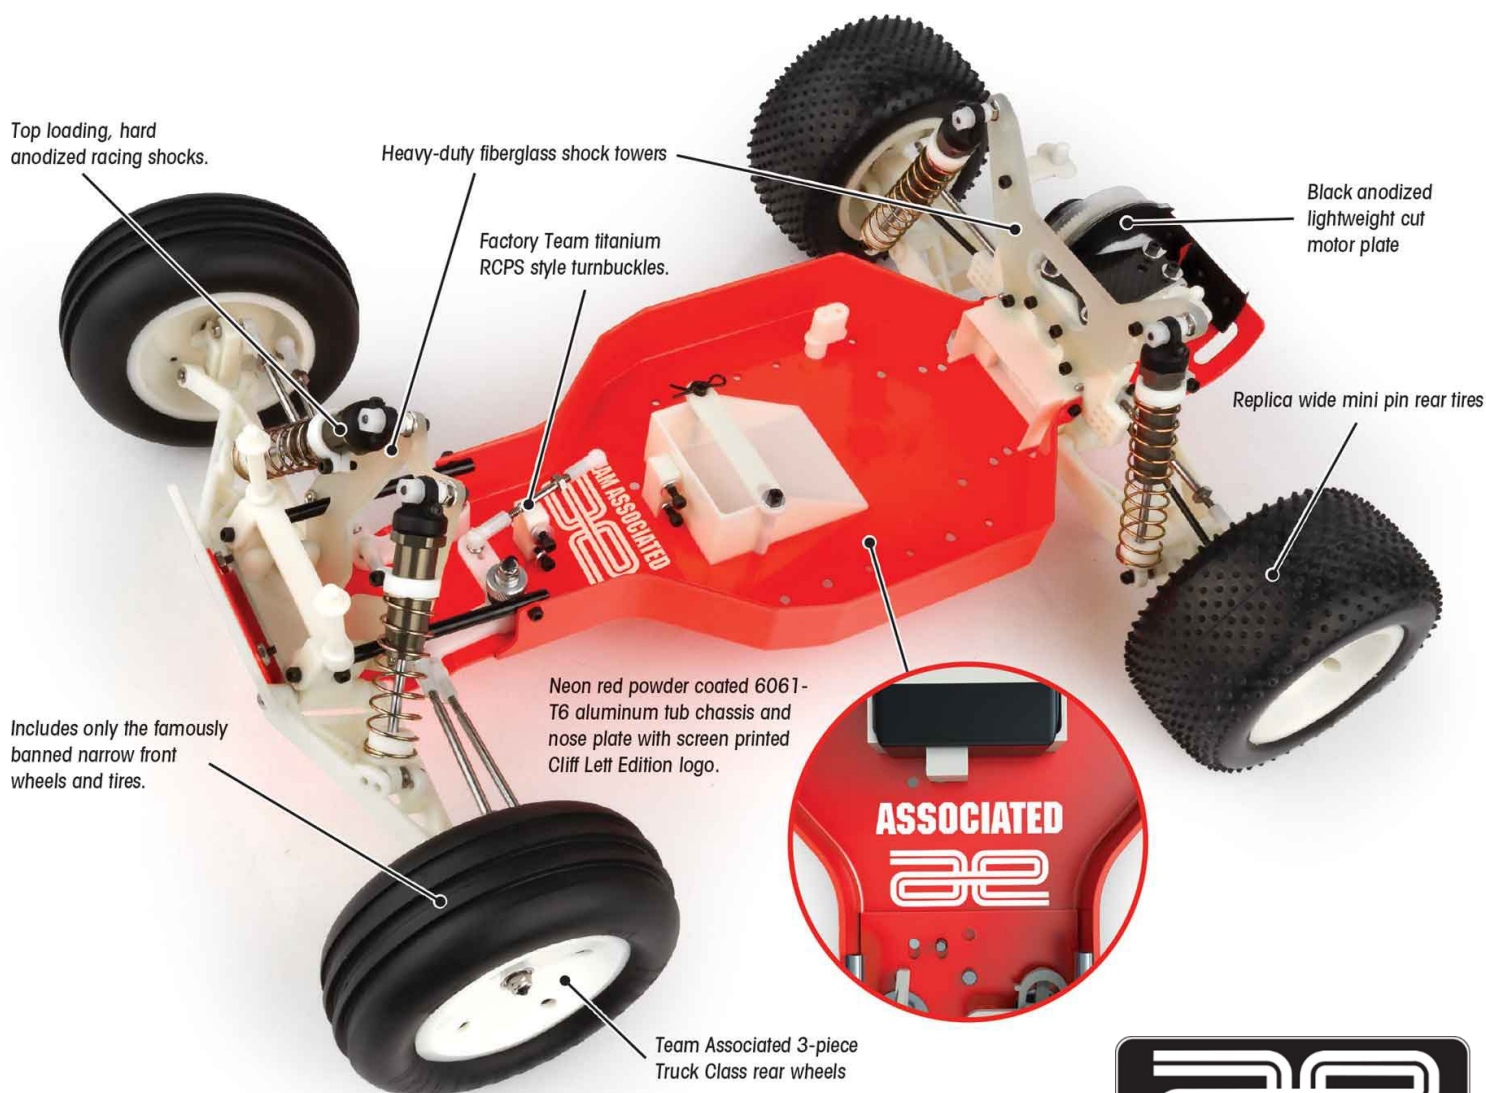

Truck racing wheels and tires were also developed specially for the RC10T. This rerelease RC10T comes with standard wide mini pin rear tires, neon red powder coated chassis, and the famously banned narrow front tires. All wheels are lightweight, 3-piece modular design, molded perfectly concentric in virgin nylon. The narrow front tires were designed for the existing ROAR Truck Class rules of the era, and used on the winning prototype RC10T's.

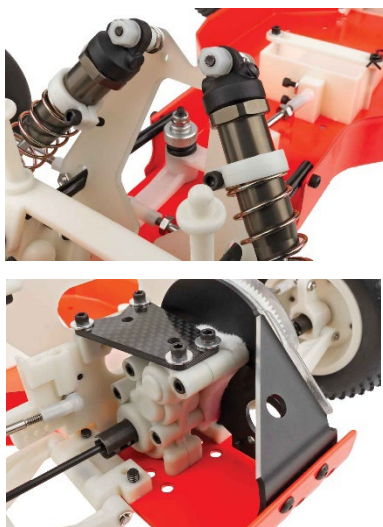

A TRIBUTE TO RACING EXCELLENCE

We are proud to present the RC10T Cliff Lett Edition, a tribute to the legendary stadium truck that made its mark at the 1991 Florida Winter Champs. This special edition faithfully recreates the look and performance of the original RC10T that Cliff drove to victory at the debut race of this iconic platform. At the heart of this release is the striking powder-coated fluorescent red chassis, a signature feature that not only catches the eye but also pays homage to the truck that dominated the competition more than three decades ago.

Staying true to its roots, the RC10T Cliff Lett Edition includes RCPS turnbuckles, which provide enhanced durability and precise adjustability, allowing drivers to fine-tune the truck for optimal performance. The truck is also equipped with the legendary Stealth transmission, a game-changing innovation that delivers smooth and efficient power transfer. To reinforce the transmission and maintain consistent performance under stress, we've also included a carbon fiber transmission brace, giving the truck the same durability and stability that Cliff relied on during his championship-winning run.

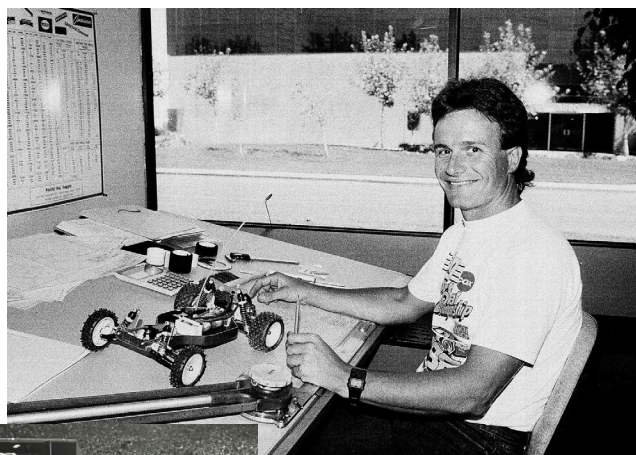

Other period-correct details complete the package, including narrow front tires, hard-anodized shocks, and full-color decal sheet to build an exact replica of Cliff's famous truck. Every element of the RC10T Cliff Lett Edition has been meticulously designed to capture the spirit of the original, giving both collectors and racers a chance to experience a piece of RC history. Whether displayed proudly or taken to the track, this edition is a fitting tribute to Cliff Lett's contribution to the RC racing world.

FROM YAMAHA FACTORY MECHANIC TO RC INNOVATOR

Cliff Lett is a renowned figure in the RC industry, known for his contributions to Team Associated and his pivotal role in advancing RC car technology. Before making a name in RC racing, Cliff began his career in the motocross industry as a factory mechanic for Yamaha team member Ricky Johnson. His work with high-performance motocross bikes equipped him with a deep understanding of suspension dynamics, gear ratios, and vehicle setup—skills that would later become invaluable in the RC world.

Cliff's passion for RC racing led him to transition from motocross to the fast-growing RC industry in the mid 1980s. His expertise quickly gained recognition, and in 1985, he founded RC Performance Specialties (RCPS), a company dedicated to producing high-quality aftermarket parts for RC cars. RCPS specialized in performance upgrades that enhanced the durability and handling of RC vehicles, making them popular among serious racers. Items like titanium turnbuckles, hinge pins, the Mirage SS body, and Green Slime are just a few items produced by RCPS.

In 1988, Cliff's talents caught the attention of Team Associated, a dominant force in the RC racing world. Upon joining Team Associated, founder Roger Curtis suggested that Associated purchase RCPS and all of its products and rebrand it as Factory Team, the company's high-performance division focused on producing top-tier parts and accessories for competitive racing. Cliff's expertise played a critical role in the development of several iconic RC products, including the RC10T, RC10GT, Team Car, Worlds Car, RC10B2, TC3, Stealth transmission, and more!

WINTER CHAMPS Winner

ASSOCIATED'S HIGH-RACING TRUCK

LEFTY'S CAR

THE POPULARITY of RC monster truck racing has been growing for the last couple of years. It started with hobbyists who built the vehicles for fun, but now it's a competitive sport. Cliff Lett's RC10T was the winner of the 1988 Florida Winter Champs. The car was designed by Cliff Lett and built by Steve Pond. The car is a 1/10 scale monster truck with a 2.4GHz radio system. It has a 10.5T motor and a 10.5T transmission. The car is painted in a blue, white, and red livery with cow spots. The car is shown in a side view and a top-down view. The top-down view shows the chassis with numbered callouts for various parts.

1. New front shock absorber with short rear shock absorber
2. New front shock absorber with short rear shock absorber
3. New front shock absorber with short rear shock absorber

Team Moo

DID YOU KNOW?

Team driver, Derek Furutani, used to paint Cliff's race bodies. During that time Derek and a few other racers created Team Moo, a play on the phrase "Mooooo-over!"; something they jokingly said at club races. They asked if Cliff wanted to join the Team Moo club which Cliff happily accepted. So, Derek painted up Cliff's RC10T body for the Florida Winter Champs with cow spots and all his other bodies moooving forward.

As both a designer and driver, Cliff Lett contributed immensely to Team Associated's success. His ability to fine-tune vehicles for peak performance earned him multiple national and international titles, while his innovations helped solidify Team Associated's reputation for excellence. Lett's lasting impact on the RC industry continues to influence competitive RC racing, and his journey from Yamaha mechanic to RC legend serves as an inspiration for enthusiasts and engineers alike.

FEATURES

- Authentic replica of Cliff Letts championship winning RC10T
- Neon red powder coated 6061-T6 aluminum tub chassis and nose plate
- Factory Team titanium RCPS style turnbuckles
- Black anodized nose tubes
- Replica narrow ribbed front tires and wide mini pin rear tires
- Black anodized lightweight cut motor plate
- Authentic Team Moo / Cliff Lett decal sheet
- Fully adjustable four-wheel independent suspension
- Carbon fiber transmission brace
- Hard anodized shock bodies
- Bleeder shock caps
- Sealed 3-gear Stealth A.T.C. transmission
- High-torque ball differential
- Adjustable slipper clutch
- Narrow front and wide rear 3-piece racing wheels
- Clear polycarbonate stadium truck body and rear wing
- Heavy-duty fiberglass shock towers
- Full precision ball bearings
- Heavy-duty servo saver
- Fits 6-cell NiMH and 2S LiPo battery packs

ITEMS NEEDED TO COMPLETE

- 6-cell NiMH or 2S LiPo for radio-controlled car
- Radio control battery charger
- 1:10 scale radio control electronic speed control
- 1:10 scale 540-size electric RC car motor
- 2-channel RC surface transmitter and its batteries
- 2-channel receiver
- Pinion gear
- Steering servo
- Lexan paint for body
- Glue for tires.
- Tools

SPECIFICATIONS

Scale	1:10
Power	Electric
Length	396.7mm (15.62in)
Width	317.5mm (12.5in)
Weight	Varies
Wheelbase	284.5mm (11.2in)
Internal Ratio	2.25:1
Power Source	Electric
Terrain:	Off-Road
Assembly Level	Kit
Drive	2WD
Body Style	Truck
