

## "Should You Build It?"

### A 5-Minute Feasibility Quiz for Inventors and Entrepreneurs

Answer each question honestly. For every 'yes,' give yourself 1 point.

1. Do you know who your end user is and what problem you're solving?
2. Have you checked if something similar already exists?
3. Do you understand your product's main features clearly?
4. Have you defined what success looks like (cost, size, performance)?
5. Can you describe how it works without jargon?
6. Do you have any idea how it might be manufactured?
7. Have you received feedback from at least 2 potential users?
8. Do you have a budget range in mind?
9. Do you know what skills you have-and what you need help with?
10. Can you name 1 or 2 next steps you'd take after this?

#### Scoring:

0-3 points: Slow down. Your idea needs development before prototyping.

4-7 points: Promising! But you may need technical or business guidance.

8-10 points: Strong concept. It may be time to start documenting and validating.

*Not sure what to do with your score?*
