

Chaining Skills Together

What happens when two skills could both fire

The Core Idea

Skills don't stack automatically. When two descriptions could both match the same input, only one fires — and overlapping descriptions can cause confusing results.

Diagnose and Fix

1. List all your active skills and their descriptions side by side.
2. Look for input types that could reasonably match more than one.
3. Narrow each description until it has one clear, distinct trigger.
4. Deliberately test edge-case inputs that sit between two skills.

SKILLS DON'T STACK

Assume only one skill fires per message unless you've specifically tested otherwise — design descriptions to not overlap.
